

**Time: 30 mins**

**Task 1 :**

Write a program in JAVA that will return the sum of two numbers. Your program should maintain the following structure:

- a. There will be one main class having a main() function.
- b. You will have to perform summation operation in a separate class using object of that class.
- c. You will just return the sum of the two numbers to the main function and print it in the main function.
